What is Moodle ?

Moodle is an Open Source Course Management System (CMS) and has become very popular among educators and consultants around the world as a tool for **creating online dynamic web sites supporting teaching / professional training / skill development/ communities of practice.**

Today Moodle is used by **65 million registered users** and is available in 70 languages. Moodle manages more than 7 million courses in 230 countries in about 75,000 registered sites.
Moodle was planned and developed on the basis of a philosophy that seeks to combine up-to-date training methodologies with collaborative IT tools.

The guiding philosophy of the environment is to support a real cognitive and collaborative alliance between people who bring different experiences and skills and to recreate "online" a real "learning community".
Many institutions and firms use Moodle to conduct fully online courses, while some use it simply to augment face-to-face courses (known as blended learning).

What is Mediterranean MoodleMoot?

The Mediterranean MoodleMoot, an **international conference** for Moodle users in North Africa, Europe and the Mediterranean region. The event will provide a unique opportunity to exchange ideas, share initiatives and projects with a wide group of **international experts and users**. Members of Moodle HQ will attend this extraordinary two-day event, together with trainers and teachers from companies and schools using Moodle.

During the conference participants will have the chance to:
- learn what Moodle is and how it is evolving
- get in touch and share experiences with colleagues using Moodle
- experiment Moodle
- evaluate Case Studies for the different fields of application
- explore new modules and plug-ins

A Moodlemoot also serves as a valuable evaluation opportunity for those considering moving to Moodle from their existing LMS.
